I'm very opposed to any legislation relative to satellite radio, especially the current attempts of the ABA to stop XM Radio from broadcasting local weather and traffic. I pay a subscription fee for my XM service and deserve all the programming that the providers chose to offer.

This is no different than the fight over satellite television not being to offer local channels for many years. I'm sorry that traditional radio feels threatened by satellite radio, but as far as I'm concerned, the free market system is speaking loudly.

Please do not stop my ability to hear local traffic and weather on my XM radio service.

Thank you.
